### **Abstract**

*A growing number of students traveling abroad to pursue higher education. International students frequently face a number of difficulties adjusting to the new academic setting, even though studying abroad offers both academic and cultural opportunities. Language barriers is one of the biggest challenges which can affects students' academic performance, participation in university activities and their social integration with peers. This research aimed to look into how language barriers on the performance in academics and social integration of the international students at Lucknow University, India. This investigation used a quantitative research methodology, and a structured questionnaire created by the researcher was used to gather information from a sample of 100 international students. The study utilized descriptive survey method. Appropriate sampling techniques were used. The data was gathered and examined using statistical methods. The responses were organized using percentages and frequencies. The study used bar graphs, tables, and pie charts to present the data clearly. Each research objective was analyzed separately to make sure the study gives clear interpretation of the results. The findings indicates that language barriers affect international students' ability to understand lectures, participate in classroom discussions, and complete academic assignments effectively. Students reported using coping strategies such as translation applications, peer support, and additional self-study materials to overcome language challenges. Additionally, the study shows <sup>6</sup>the role of the university in providing academic support programs that are assisting students to adjust to the learning environment. Considering the outcome, universities should introduce Hindi language courses for international*

*students who do not speak Hindi, academic writing support sessions, and mentoring programs to improve the academic integration and success of international students.*

**Keywords:** Language barrier, international students, academic performance, higher education, language proficiency, social integration

## **Introduction**

In today's world, many students are going to other countries to study abroad. Many students decides to study overseas for better education, gain exposure to other cultures, and improve their career growth. However, students may find it challenging to adapt to a new academic, particularly when students have to learn and communicate in a language that is not their first language. Language proficiency plays a vital role in academic success because it has an impact on students' ability to understand lectures, participate in classroom discussions, complete academic tasks and also interact with people. Earlier studies indicates that restricted language proficiency can reduce students' confidence and participation in the classroom (Andrade, 2006). In addition, international students usually encounter communication difficulties with faculty members and fellow course mates, **which could impact their academic** achievement (Smith & Khawaja, 2011). Studies also indicate that language challenges contribute to academic stress and difficulty in social integration (Yeh & Inose, 2003). Therefore, increasing institutional support systems for international students requires a comprehension of **the effects of the impact of** language barriers.

## **Importance of the Study**

Inclusion of international students adds value to universities culturally and academically. However, language barriers can lead to issues that limit their academic success, social integration and university experience. Investigating these challenges helps universities understand the difficulties faced by international students and develop effective support services to support them. This investigation adds contributes to the existing research by examining how language barriers affects academic performance and social integration at Lucknow University and by identifying coping mechanism used by students

## **Objectives of the Study**

1. To examine the extent to which language barriers affect academic performance.

2. To analyze coping strategies adopted by international students.
3. To assess the role of academic support services.
4. To explore the relationship between language proficiency, social integration and academic success.

### **Hypothesis of the Study**

H0: There is no significant relationship between language proficiency, social integration and academic success of international students at Lucknow University.

### **Delimitation of the Study**

The study is delimited specifically to international students enrolled at Lucknow University

It only focuses on how language barriers affects their academic performance and social integration.

The sample was limited to 100 international students.

### **Research Methodology**

#### **Research Design**

The study adopted a quantitative research approach and utilized a descriptive survey design. The approach was used as it enabled the researcher to clearly describe the current state of language barriers and their impacts on the academic performance and social integration of international students.

#### **Targeted Population**

The population for the present study included all international students registered at Lucknow University. This population comprised international students from various linguistic backgrounds who might experience different challenges of language barriers because of the variations in their native languages and the university's official language.

#### **Sample**

100 international students drawn from various faculties at Lucknow University made up the study's sample. These students were chosen to represent the larger group of international students enrolled at the university. The study utilized convenience sampling procedure. The approach was selected because it's easy, practical, and suitable for

collecting data within a limited time.

### **Tool of the Study**

Data were collected using a structured questionnaire designed by the researcher was used to collect data. Before the survey was given to respondents, it was examined for relevance and clarity make sure it was appropriate for the research. The answers were recorded using a five-point Likert scale (Strongly Agree to Strongly Disagree). The researcher decided to employ a questionnaire because it facilitates the rapid collection of data from a large group..

### **Data Analysis and Interpretation**

Statistical methods were employed to analyze gathered data. The response were organized using percentages and frequencies. The study used bar graphs, tables, and a pie chart to present the data clearly.

#### **Objective 1: To examine the extent to which language barriers affect academic performance**

The initial objective was to examine the extent to which language barriers affect academic performance. 70% of students reported difficulty in understanding lectures in Hindi, 65% of students faced challenges in writing or expressing ideas and 68% reported poor exam performance because of misunderstanding. The findings shows that language barriers have an adverse impact on the academic achievement of students by affecting their understanding of lectures, their capacity to express ideas and performance in examination.

<b>Statement</b>	<b>Percent Agree (%)</b>	<b>Interpretation</b>
Difficulty understanding lectures in Hindi	70% (70/100)	Strong evidence of difficulty.
Challenges in writing or expressing ideas	65% (65/100)	Moderate evidence of difficulty.
Poor exam performance due to misunderstanding	68% (68/100)	Moderate evidence of difficulty.

#### **Objective 2: To analyze the coping strategies adopted by international students**

Data displayed in the following table shows 72% of students use translational tools or apps which means it is widely used by international students. 67% of students shows that students seek peer

help which is also widely used. The table also shows 55% of students attend language sessions, showing a moderate use. The results shows that international students rely more on translational tools to manage language difficulties.

Strategy	Percent Agree (%)	Interpretation
Using translation tools/apps	72% (72/100)	Widely used
Seeking peer help	67% (67/100)	Widely used
Attending language Sessions	55% (55/100)	Moderately used

### **Objective 3: To assess the role of academic support services**

The results in the table below show that 77% of the pupils stated that instructors provide explanations, showing a positive response. About 63% of the students reported that the university provides workshops. Also, 75% of the students showed that library and online resources in English are available. The results suggests that while academic supports are available, the may not be fully effective in addressing the language difficulties faced by international students.

Support Statement	Percent Agree (%)	Interpretation
Teachers provide explanations	77% (77/100)	Generally positive
University provides workshops	63% (63/100)	Needs improvement
Library/online resources in English	75% (75/100)	Generally positive

### **Objective 4: To explore the relationship between language proficiency and social integration and academic success.**

This objective was to explore the relationship between language proficiency and social integration and academic success. The results below shows that 10% of Nepali had difficulty following when the instructors speak in Hindi, while 85% of non-Hindi students had difficulty. 15% of Nepal students felt left out when peers switched to Hindi, compared to 80% of non-Hindi students. This shows that being proficient in the language is crucial for academic achievement and social integration.

Item	Nepali Agree %	Non-Hindi Agree %	Interpretation
Difficult to follow when instructors speak in Hindi	10% (10/100)	85% (85/100)	Non-Hindi speakers report more difficulty.
Left out when peers switch to Hindi	15% (15/100)	80% (80/100)	Hindi use limits inclusion for non-Hindi students.

## Results and Discussion

Language barriers has a major effect on international students' academic performance and social integration at Lucknow University, according to the study. Many students faced difficulty in understanding lectures, especially when instructors used Hindi. This made it hard for them to follow lessons and also taking notes, which affected their academic performance. Students also experienced challenges in writing assignments and expressing their ideas clearly. In addition, some students misunderstood exam questions, which negatively affected their performance.

Additionally, the findings indicated that students used different strategies to manage language difficulties. Many students used translation tools and applications, while others depended on classmates for help. These strategies reveals that students are trying to cope with language barriers. However, fewer students attended language support sessions, which shows that the programs might not be completely effective.

In relation to academic support services, the outcomes suggests that educators are crucial in helping international students. Many respondents stated that teachers provide explanations. Library and online resources in English were also helpful for self-learning. However, university workshops were less helpful compared to other support services.

The results further revealed a significant difference between students Hindi speaking and non-Hindi speaking students. Students who comprehend Hindi faced fewer difficulties in following the instructors and were more comfortable in social interactions with peers. Non-Hindi-speaking students experienced more academic and social challenges, especially when communication took

place in Hindi. This reveals that language proficiency is indispensable for academic success and social integration.

Although the absence of inferential statistical analysis, the descriptive findings clearly show a relationship between language proficiency, academic performance and social integration. Therefore, the null hypothesis is not supported based on the observed data patterns

### **Conclusion**

The study determines that language barriers affect the academic performance of international students at Lucknow University. International Students face difficulties in understanding lectures, writing or expressing ideas and performing well in examinations. Although they use strategies such as translation tools and peer support, these are not always enough. Academic support services help to some extent, but language challenges still remain. Therefore, improving language support is important for better academic success and social integration.

### **Educational Implications**

- Clear and fair language during lectures is important for enabling students to understand concepts and participate actively.
- Universities should strengthen academic writing support services to help students develop communication and writing skills.
- Peer support programs should be promoted to support international students in adjusting to academic and social life.
- Universities should develop practical language support programs that emphasize on real academic situations, such as classroom discussions, presentations, and academic writing.
- The University authorities should consider developing clear policies that address the concerns of international students.

### **Recommendations**

- The University should introduce a basic Hindi course for international students to help them adapt academically and socially.
- Teachers should try to use English to explain key concepts and provide clear explanations during lectures.

- Departments should organize regular academic writing support sessions to improve students' writing and presentation skills.
- Peer mentoring programs should be introduced to support international students academically and socially.
- The university should conduct orientation programs to explain academic expectations, exam patterns, and classroom communication.
